Dear Hiring Manager,

I am thrilled at the prospect of joining your team, having seen the exciting opportunities your organization is currently exploring in Medical, robotics and autonomous systems. With a keen interest in developing cutting-edge technology, I am drawn to your commitment to innovation in the fields of motion control and AI-driven automation.

During my time at ZF Mobility Solution, I led the development and integration of real-time multi-sensor stacks across radar, lidar, camera, and edge platforms for Level-4 autonomous shuttle systems. This experience required a deep understanding of robotics software and real-time systems, aligning perfectly with your current focus areas. Leveraging platforms like Nvidia Drive PX2 and Thor, I created robust safety-critical systems that integrated seamlessly with ROS/ROS2 environments for enhanced motion planning and sensor fusion. These efforts not only improved the system's operational efficiency but also set new standards for safety and reliability in autonomous vehicle development.

I thrive in cross-functional environments, having led distributed validation teams across multiple regions to improve tooling and workflows, a quality I understand is central to your organizational culture. My experience with technologies such as CUDA, TensorRT, and DeepStream exemplify my capacity to drive performance in high-stakes environments and my ability to deliver complex projects on time.

I am eager to contribute to your company's mission of enhancing interconnected systems and autonomous functionalities. I am confident that my background in engineering and leadership skills will allow me to add significant value to your team. I am very much keen to discuss how my experience and skills align with your needs.

Sincerely,

Rahul Aloth Rajan
